

RAJ VAYA

DevOps Engineer | Platform Engineering | Multi-Cloud Kubernetes

Pune, Maharashtra | raj.vaya2017@gmail.com | +91 83858 83914 | linkedin.com/in/raj-vaya | github.com/rajvaya13

PROFESSIONAL SUMMARY

DevOps and Platform Engineer with 4.5+ years across multi-cloud Kubernetes (EKS, GKE, AKS, OpenShift, vSphere, bare-metal), CI/CD automation, and Infrastructure as Code. Built production GitHub Actions pipelines, Terraform-based self-service provisioning, and large-scale Kubernetes observability platforms supporting 64,000+ devices. Reduced release validation effort by ~60% and Kubernetes certification runtime from ~7h to ~4h. Google Cloud Professional DevOps Engineer certified; comfortable across AWS, GCP, and Azure ecosystems.

TECHNICAL SKILLS

Containers & Orchestration: Kubernetes, Docker, Helm, HPA (Horizontal Pod Autoscaling), multi-cluster and multi-distribution deployments, ingress controllers, PVC and storage class troubleshooting

CI/CD & Automation: GitHub Actions, TeamCity, GitOps workflows, Maven, JUnit, Rapid/Kokoro (Google internal)

Cloud Platforms: AWS (EKS, IAM, S3), GCP (GKE, GCS, Cloud SQL, IAM, Cloud Build), Azure (AKS), Red Hat OpenShift, VMware vSphere, bare-metal Kubernetes

Infrastructure as Code: Terraform, Ansible, self-service infrastructure provisioning, Infrastructure provisioning

Monitoring & Observability: Prometheus, Grafana, New Relic, SNMP telemetry at scale, Kubernetes cluster debugging, log analysis

Security & Artifact Management: JFrog Xray (SCA, vulnerability scanning), Artifactory, IAM, RBAC, ServiceNow approval workflows

Languages & Scripting: Bash, Shell, Go (Golang), Python (Basic), YAML, SQL

Databases & OS: PostgreSQL (9.6 to 10+ migration), Linux (RHEL, Ubuntu)

Collaboration & Tooling: Git, GitHub, Jira, Confluence, ServiceNow, Agile/Scrum

PROFESSIONAL EXPERIENCE

Accenture | DevOps Engineer

January 2025 – Present

Google Cloud Client - Apigee Hybrid Platform Engineering | Pune, Maharashtra

- Migrated Kubernetes certification CI/CD pipelines from a 3-stage to a consolidated 2-stage workflow, reducing manual re-trigger effort by 50% and certification runtime from ~7 hours to ~4 hours per Kubernetes version.
- Validated Apigee Hybrid Helm releases across six Kubernetes distributions (GKE, AWS EKS, Azure AKS, Red Hat OpenShift, VMware vSphere, bare-metal), covering ingress, IAM, storage class, and networking variations across each platform.
- Diagnosed and resolved Kubernetes and Helm deployment failures across production and E2E clusters, including CrashLoopBackOff, image pull, PVC binding, quota exhaustion, and ingress controller issues.
- Executed PostgreSQL 9.6 to 10+ migration using GCS import/export, IAM-scoped service accounts, and phased rollout strategies with zero downtime across development, staging, and production environments.
- Contributed Golang-based fixes to internal Apigee Edge tooling under the EDA workstream, resolving runtime issues in CLI utilities used across the platform engineering team.

Accenture | DevOps Engineer

November 2021 – December 2024

Global Banking Client - DevOps & Observability Engineering | Gurugram, Haryana

- Architected two production GitHub Actions CI/CD pipelines automating JFrog Xray vulnerability scanning, Jira ticket creation, artifact promotion, and ServiceNow approval workflows - handling ~50 deployments per month across 15+ enterprise applications and reducing manual release validation effort by ~60%.
- Built self-service VM provisioning using Terraform within a GitHub Actions workflow, reducing VM request turnaround from ~2-3 days (manual ticket-driven flow) to under 30 minutes by allowing requesting teams to trigger the pipeline and receive a provisioned virtual machine without DevOps team intervention.
- Designed a Kubernetes-based SNMP monitoring platform on New Relic, processing telemetry from 64,000+ enterprise networking devices using Horizontal Pod Autoscaling to handle variable poll-cycle load.
- Engineered application packaging using Bash/Shell scripts to bundle scanned binaries into deployable packages, then automated package deployment across 100+ Linux (RHEL/Ubuntu) servers using Ansible playbooks.
- Built a Java + Maven + JUnit test suite integrated with TeamCity to automate validation of application packages against defined test cases, reducing manual testing time per release cycle from 3-5 days to under 3 hours.

EDUCATION & CERTIFICATIONS

B.E. Information Technology - Walchand Institute of Technology, Solapur | CGPA: 8.87 | 2021

Google Cloud Professional Cloud DevOps Engineer (2024) • **Google Cloud Associate Cloud Engineer (2022)**
