## DEVOPS ENGINEER | PLATFORM ENGINEERING | SRE

---

DevOps Engineer with 4.5+ years of experience in Kubernetes, CI/CD automation, cloud infrastructure, and platform engineering across banking and Google Cloud environments. Skilled in Terraform, GitHub Actions, Docker, Helm, Ansible, GCP, and Infrastructure as Code (IaC). Reduced manual effort by 50% and improved certification runtime by 40% through workflow automation initiatives.

## CORE COMPETENCIES

---

Kubernetes | Terraform | GitHub Actions | CI/CD | Docker | Helm | Ansible | GCP | Infrastructure as Code (IaC) | Platform Engineering | Observability | Linux | GitOps | Cloud Infrastructure | Automation

## EXPERIENCE

---

### Accenture | DevOps Engineer

#### Google Cloud Client - Apigee Hybrid Platform Certification Team

January 2025 - Present, Pune, Maharashtra

- Automated Kubernetes platform certification workflows by migrating execution pipelines from Release Portal to Rapid, reducing manual operational effort by 50% and improving certification runtime by 40%.
- Validated Apigee Hybrid releases across GKE, EKS, AKS, OpenShift, VMware vSphere, and hybrid Kubernetes environments, ensuring stable multi-cloud deployments and release readiness.
- Troubleshooted Kubernetes and Helm deployment failures, including CrashLoopBackOff, image, storage, and quota-related issues, improving deployment reliability during certification cycles.
- Supported PostgreSQL migration from v9.6 to newer versions using GCP IAM, service accounts, and Cloud Storage import/export strategies, enabling successful platform modernization.
- Contributed to Golang-based internal tooling by resolving bugs, implementing fixes, and supporting Linux-based deployments to improve platform stability and operational efficiency.

### Accenture | DevOps Engineer

#### Global Banking Client - DevOps & Observability Engineering

November 2021 - December 2024, Gurugram, Haryana

- Designed and implemented GitHub Actions-based CI/CD pipelines for automated vulnerability scanning, artifact promotion, and Infrastructure as Code workflows, improving deployment efficiency and reducing manual validation effort across enterprise release processes.
- Automated infrastructure provisioning workflows using Terraform and GitHub Actions, reducing manual setup effort and accelerating environment provisioning across development and testing environments.
- Built Maven + JUnit automation frameworks integrated with TeamCity, reducing testing timelines from weeks to hours and improving release validation efficiency.
- Developed shell-based packaging and deployment automation using Ansible across Linux environments, streamlining deployment workflows and reducing repetitive operational tasks.
- Architected scalable Kubernetes-based SNMP monitoring solutions processing telemetry from 64,000+ enterprise networking devices using Docker and Kubernetes.
- Implemented observability and monitoring solutions using New Relic, improving infrastructure visibility, operational monitoring, and incident troubleshooting across enterprise systems.

## SKILLS

---

**DevOps & Platform Engineering:** Kubernetes, Docker, Helm, CI/CD, GitHub Actions, Jenkins, TeamCity, Artifactory, Maven

**Cloud & Infrastructure:** GCP, Terraform, Ansible, Infrastructure as Code (IaC), Linux

**Observability & Security:** New Relic, JFrog Xray, Monitoring, Logging, Vulnerability Scanning, DevSecOps

**Programming & Automation:** Golang, Java, Bash, Shell, YAML

**Version Control & Tools:** Git, Bitbucket, GitHub, Jira, Agile, Confluence, Buganizer

## EDUCATION

---

### Bachelors of Engineering(B.E.) in Information Technology

Walchand Institute of Technology • Solapur, Maharashtra • 2021 • 8.87 CGPA

## CERTIFICATIONS

---

### Google Cloud Professional Cloud DevOps Engineer Certification

Google (2024)

### Google Cloud Associate Cloud Engineer Certification

Google (2022)
